

Coding & Solution

Date	xxxxxx
Team ID	xxxxxx
Project Name	Virtual Agent-Driven SLA Breach Awareness & Justification System

This section evaluates the quality and completeness of the implemented ServiceNow-based SLA governance solution. The system demonstrates proactive awareness, structured accountability, and real-time reporting without the use of custom scripting.

Instructions:

1. Ensure all Flow Designer triggers and UI Policies are properly configured to automate SLA monitoring.
2. The solution must address real-time justification for incidents approaching a breach threshold.
3. Include configurations for Virtual Agent topics and Dashboard reporting widgets.
4. Attach the relevant ServiceNow Update Set or repository link in the table below.

Solution Summary

Field	Details
Repository Link / URL	📄 File
Programming Language(s)	ServiceNow No-Code Configuration
Framework(s) Used	Flow Designer, Virtual Agent, UI Policies
Key Features Implemented	Proactive SLA At-Risk alerts (80%), Virtual Agent Conversational Justification, Automated Email Notifications to Assignees/Managers.
Pending Features	Final integration of the Dashboard URL in manager notification emails.
Setup / Run Instructions	1. Install ITSM Virtual Agent Conversations plugin. 2. Create Incident fields: <code>u_sla_breach_reason</code> , <code>u_sla_acknowledgement</code> , <code>u_sla_breach_justification</code> . 3. Activate "SLA at Risk Notification" flow.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Logic is modular and organized into reusable Flows and UI Policies	Yes ▾

S.No	Criteria	Status (Yes / No)
2	Meaningful field names (e.g., <code>u_sla_breach_reason</code>) are used	Yes ▾
3	Documentation includes clear SLA Start/Pause/Stop conditions	Yes ▾
4	Field validation/mandatory rules are implemented for critical data	Yes ▾
5	Virtual Agent topics run without conversational errors	Yes ▾
6	Configurations are captured in a version control or update set	Yes ▾

Additional Notes / Comments:

The system is designed to trigger when the business elapsed percentage of an SLA reaches or exceeds 80%. Upon this trigger, the system activates a conversational governance model where the assignee must provide a reason and justification via the Virtual Agent or directly on the Incident form, ensuring high audit readiness and compliance.
