

Project Executable Files

Date	XXXXXX
Team ID	XXXXXX
Project Name	Virtual Agent-Driven SLA Breach Awareness & Justification System

This document contains the structural overview and submission details for the ServiceNow administrative solution designed to enhance SLA governance through proactive awareness and structured accountability.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	ServiceNow Update Set (XML format)	Yes
2	Documentation / Admin Setup Guide	Yes
3	SLA Definition Configurations	Yes
4	Flow Designer Logic (SLA at Risk)	Yes

S.No	Item to Submit	Submitted (Yes / No / NA)
5	Virtual Agent Topic Design	Yes
6	Dashboard & Reporting Widgets	Yes
7	UI Policy & Dictionary Entries	Yes
8	Demo Walkthrough Video	 File

Step 2: File / Folder Structure

The project is structured within the ServiceNow platform as a series of administrative configurations and scoped application components:

- **System UI / Dictionary**
 - **u_sla_breach_reason**: Choice field with reasons like System Outage and Dependency on third party.
 - **u_sla_breach_justification**: String field for detailed explanations.
 - **u_sla_acknowledgement**: Boolean flag for user accountability.
- **Service Level Management**
 - **Incident Resolution - Virtual Agent Governance**: 8-hour duration SLA definition.
- **Process Automation**
 - **SLA at Risk Notification**: Flow Designer logic triggered at 80% business elapsed time.
- **Virtual Agent**
 - **SLA Breach Awareness & Justification**: Conversational topic for SLA risk acknowledgement.
- **Reporting & Dashboards**

- **SLA Governance & Accountability Dashboard:** Includes widgets for Breach Reasons, Pending Justifications, and Performance Trends.

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	 Place (ServiceNow PDI)
Platform Provider	ServiceNow
Login Credentials	Admin:  Person / Password:  Person
Repository Link	 File

Step 4: Run Instructions

Pre-requisites:

ServiceNow Instance (Vancouver or later) with ITSM Virtual Agent Conversations plugin installed.

1. **Import Update Set:** Navigate to **Remote Update Sets** and upload the provided XML file.
2. **Preview and Commit:** Preview the update set to ensure no collisions and click **Commit Update Set**.
3. **Activate Flow:** Navigate to **Workflow Studio** and ensure the "SLA at Risk Notification" flow is active.
4. **Publish VA Topic:** Open **Virtual Agent Designer** and publish the "SLA Breach Awareness & Justification" topic.
5. **Verify SLA:** Create a new Incident to trigger the "Incident Resolution - Virtual Agent Governance" SLA.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Email notifications may be delayed in PDI environments.	Check 'System Mailboxes' to verify generation.
2	Virtual Agent invocation requires the itil role.	Ensure testing users have the appropriate system roles.
