

Code-Layout, Readability and Reusability

Date: xxxxx

Team ID: xxxxx

Project Name: Virtual Agent-Driven SLA Breach Awareness & Justification System

This document evaluates the configuration and logical structure of the Virtual Agent-Driven SLA Breach Awareness & Justification System. Although implemented using ServiceNow Admin capabilities without scripting, the design ensures high maintainability and systematic governance through structured Flow Designer logic, UI Policies, and Virtual Agent topics.

Code Layout Checklist

S.No	Code Quality Parameter	Description	Followed (Yes/No)	Remarks
1	Consistent Logic Flow	Uniform structure in Flow Designer and VA topics	Yes ▾	Logical progression from SLA threshold to notification.
2	Proper Component Structure	Configuration s are logically	Yes ▾	Separation of SLA Definitions, UI

S.No	Code Quality Parameter	Description	Followed (Yes/No)	Remarks
		organized by module		Policies, and Flows.
3	Meaningful Naming	Variable/Field names reflect their purpose clearly	Yes ▾	Clear naming: u_sla_breach_reason, u_sla_acknowledgement.
4	Descriptive Titles	Flows and Topics are descriptively named	Yes ▾	"SLA at Risk Notification" and "Incident Resolution".
5	Configuration Comments	Descriptions and Work Notes explain logic	Yes ▾	Automated Work Notes: "SLA Crossed 80%, Governance Activated".
6	Modular Design	System is split into reusable nodes and sub-actions	Yes ▾	Virtual Agent utilizes reusable greeting and decision nodes.

S.No	Code Quality Parameter	Description	Followed (Yes/No)	Remarks
7	No Redundant Logic	Efficient use of triggers to avoid duplicate actions	Yes ▾	Flow trigger runs "Once" per threshold breach.
8	Error Handling	Governance ensures required fields are populated	Yes ▾	UI Policies enforce mandatory fields to prevent data gaps.

Reusable Components / Modules

S.No	Component Name	Technology	Reusability Level
1	SLA Breach Notification Flow	ServiceNow Flow Designer	High ▾
2	SLA Justification UI Policy	ServiceNow UI Policy	Medium ▾
3	SLA Governance VA Topic	ServiceNow Virtual Agent	High ▾
4	SLA Breach Reason Choice List	ServiceNow System Dictionary	High ▾

Overall Configuration Quality Assessment

Aspect	Rating (1-5)	Comments
Structure & Layout	5	Logical flow from SLA trigger to manager notification and VA interaction.
Readability	5	High clarity achieved through meaningful field labels and descriptive flow naming.
Reusability	4	Choice lists and Flow logic can be applied to other SLA definitions.
Documentation	4	Clear step-by-step test cases and logic definitions provided in system resources.
Overall Score	4.5	Excellent "no-code" implementation maximizing native platform features.
