Maximum Marks	5 Marks

Solution Architecture

Solution Architecture Diagram:

The following high-level visual representation maps the Virtual Agent-Driven SLA Breach Awareness & Justification System across the Presentation, Application, and Data layers.

Presentation / Client Layer

Service Portal & Virtual Agent Interface

(e.g., ServiceNow Service Portal, Conversational Chatbot)

↓↑

API Gateway / Load Balancer

(ServiceNow Platform REST API / Integration Hub)

↓↑

Application Layer (Microservices)

- **Auth Service:** ServiceNow Platform Security (ITIL Roles)
- **Core Logic:** Flow Designer (SLA 80% Trigger), UI Policy Engine (Mandatory Justification)

- **External Integrations:** Email Notification Service (SMTP)
- ↓↑

Data / Storage Layer

ServiceNow System Tables
(Incident [incident], Task SLA [task_sla])

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides the conversational interface and dashboard for tracking SLA accountability.	Service Portal, Virtual Agent, Dashboards
API Gateway	Routes requests between the client-side Virtual Agent and backend server-side logic.	ServiceNow API Gateway
Core Logic Services	Orchestrates automated notifications at 80% breach threshold and enforces justification logic.	Flow Designer, UI Policies, Virtual Agent Designer
Data Layer	Stores incident records, SLA performance metrics, and custom justification fields.	Incident Table, Task SLA Table

Action Required:

Assignees must provide a valid breach justification (e.g., "System outage", "Dependency on third party") before closing incidents to ensure audit readiness and SLA compliance.
