

Technology Stack

Date	XXXXX
Team ID	XXXXX
Project Name	Virtual Agent-Driven SLA Breach Awareness & Justification System

Define Your Technology Stack

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Technology Stack Details

S.No	Architecture Component	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	ServiceNow Service Portal & Virtual Agent	Provides a conversational interface for proactive SLA awareness and guided governance instructions.

S.No	Architecture Component	Technology Chosen	Justification / Purpose
2	Backend / Server-Side	ServiceNow Admin (No-code)	Implementation is achieved using ServiceNow Admin capabilities without the need for custom scripting, ensuring easier maintenance.
3	Business Logic	Flow Designer & UI Policies	Automates notifications when SLAs reach an 80% threshold and enforces mandatory justification fields on the Incident form.
4	Database / Data Storage	ServiceNow Incident & Task SLA Tables	Centralized repository for tracking incident data, SLA definitions, and breach reasons for audit readiness.
5	Analytics & Reporting	Platform Analytics / Dashboards	Visualizes breach distribution by reason, assignment group, and performance trends for real-time SLA governance.

Tooling and Integrations

S.No	Component	Technology Chosen	Justification / Purpose
6	Third-Party APIs / Tools	ITSM Virtual Agent Conversations	Necessary plugin to enable conversational SLA governance and automated user acknowledgment workflows.
7	Workflow Automation	Workflow Studio	Used to design the "SLA at Risk" and "SLA Breach" notification flows that trigger based on elapsed time percentages.
