

Virtual Agent-Driven SLA Breach Awareness & Justification System

Project Details	
Date	XXXXXX
Team ID	XXXXXX
Project Name	Virtual Agent-Driven SLA Breach Awareness & Justification System

Empathy Map Structure

Create an empathy map to understand your customer/user from four perspectives—what they Say, Think, Do, and Feel—in relation to the problem your project addresses. This helps the team build a customer-centric solution.

PERSONA NAME: ITIL User / Incident Assignee

SAYS	DOES
* "Yes, I understand and acknowledge the SLA risk."	* Navigates to the Service Portal to interact with the Virtual Agent.
* "The email server is down, which is causing this delay."	* Selects "SLA Breach Awareness & Justification" from the topic list.
* "I need to provide a valid breach justification before closing this."	* Opens the Incident form to provide "SLA Breach Reason".
* "How can I improve my SLA results?"	* Submits justifications such as "Dependency on third party" or "System outage".
* "This incident requires immediate action."	* Acknowledges SLA risk directly through conversational chat.

THINKS	FEELS
* "I must comply with SLA governance to support audit readiness."	* Feels a sense of urgency when receiving "SLA At Risk - Immediate Action Required" notifications.
* "The SLA is already at 80%—I need to act now."	* Feels pressured to maintain SLA compliance and avoid violations.

THINKS	FEELS
* "Providing a justification will help the team understand the delay."	* Feels accountable for SLA performance trends displayed on the dashboard.
* "Using the Virtual Agent is a faster way to complete this governance step."	* Feels informed when the SLA Warning Notification provides remaining time.
* "I need to make sure my assigned incidents are not breaching."	* Feels alert when "SLA At Risk" flags are automatically checked on their records.

Summary of Findings

The ITIL User persona is primarily driven by the need for **accountability** and **governance compliance**. By utilizing a Virtual Agent-driven system, the user is proactively guided to justify delays, ensuring that the organization remains audit-ready and that breach reasons are captured systematically rather than being left empty. The integration of Flow Designer notifications ensures the user feels the necessary urgency to act before a breach occurs.
