Problem-Solution Fit Analysis

Virtual Agent-Driven SLA Breach Awareness & Justification System

1. CUSTOMER SEGMENTS [CS] ITIL Users, Technicians, Managers.	2. PROBLEMS / PAINS [PR] SLA breaches, lack of real-time awareness, audit failures.	3. TRIGGERS TO ACT [TR] SLA breach at 80% or 100% threshold.
4. EMOTIONS [EM] Stress before (manual tracking), confidence/accountability after.	5. AVAILABLE SOLUTIONS [AS] Manual notifications, standard reporting (often ignored).	6. CUSTOMER LIMITATIONS [CL] High workload, human error in manual logging.

1. CUSTOMER SEGMENTS [CS] ITIL Users, Technicians, Managers.	2. PROBLEMS / PAINS [PR] SLA breaches, lack of real-time awareness, audit failures.	3. TRIGGERS TO ACT [TR] SLA breach at 80% or 100% threshold.
7. BEHAVIOR + INTENSITY [BE] Reactive behavior, inconsistency in documentation.	8. CHANNELS OF BEHAVIOR [CH] ServiceNow Portal, Virtual Agent, Email.	9. PROBLEM ROOT CAUSE [RC] Lack of proactive capture; disconnect between resolution and governance.
10. YOUR SOLUTION [SL] Virtual Agent-Driven System (automated notifications, mandatory justification).		

Solution Summary & Design Reference

This document aligns with the **Problem-Solution Fit Canvas** framework to validate the development of the SLA Breach Awareness & Justification System. By leveraging ServiceNow's administrative capabilities—including Flow Designer, UI Policies, and Virtual Agent Designer—the solution transforms a reactive manual process into a proactive governance engine.

Key Governance Components:

- Real-time Awareness: Virtual Agent prompts users to acknowledge risks immediately when timers hit 80%.

- Forced Accountability: UI Policies make justification fields mandatory upon SLA risk, ensuring audit-ready data.
- Centralized Visibility: Dashboards track "Acknowledged vs. Unacknowledged Breaches" and "Top Assignees with Violations" for managerial oversight.
