

Project Initialization and Planning Phase

Project Proposal (Proposed Solution) report

The proposal report aims to enhance SLA governance by introducing proactive awareness, structured accountability, and real-time reporting using ServiceNow Admin capabilities. It addresses the need for centralized visibility into SLA breaches, ensuring that every violation is acknowledged and justified through a conversational interface. Key features include Virtual Agent integration for real-time acknowledgement and Flow Designer for automated threshold notifications.

Date	XXXXXX
Team ID	XXXXXX
Project Title	Virtual Agent-Driven SLA Breach Awareness & Justification System
Project Overview	
Objective	To provide centralized SLA visibility, track accountability, and capture user

	acknowledgements via conversational SLA governance.
Scope	The project involves configuring ServiceNow Backend Setup, Flow Designer notifications for 80% thresholds, UI Policies for field visibility, and Virtual Agent topic design.
Problem Statement	
Description	Current SLA management lacks proactive awareness and a structured method for assignees to provide breach justifications without scripting.
Impact	Undocumented SLA breaches lead to gaps in governance and performance reporting, making it difficult to identify recurring issues such as third-party dependencies or system outages.
Proposed Solution	
Approach	Implementing a scriptless solution leveraging ServiceNow Admin tools to create a proactive notification system and a conversational "SLA Breach Awareness & Justification" bot.

Key Features	- Real-time SLA At Risk notifications (Flow Designer). - Mandatory breach justification fields on the Incident form triggered by SLA risk. - Centralized Governance Dashboards visualizing breach reasons and performance trends.
---------------------	---

Resource Requirements

Resource Type	Description	Specification/Allocation
Platform		
Instance	ServiceNow Personal Developer Instance (PDI) or Enterprise Instance	Zurich version or later
Plugins	ITSM Virtual Agent Conversations	Version 9.3.2 or equivalent
Configuration		
Workflow Tools	Flow Designer	For automated email alerts at 80% and 100% SLA thresholds

Resource Type	Description	Specification/Allocation
Logic	UI Policies	To enforce mandatory fields: SLA Breach Reason and Justification
Conversations	Virtual Agent Designer	Topic: SLA Breach Awareness & Justification
Data Setup		
Incident Fields	Dictionary Entries	SLA Breach Reason (Choice), SLA Acknowledged (Boolean)
Reporting	Dashboard Widgets	Pie charts for breach reasons and bar charts for assignee violations
