

Solution Requirements

Date	XXXXX
Team ID	XXXXX
Project Name	Virtual Agent-Driven SLA Breach Awareness & Justification System
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- Functional Requirements (FR) define specific behaviors, functions, or features of the system (What the system should do).
- Non-Functional Requirements (NFR) specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should be).

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (H/M/L)
1	Authentication	Secure user login via ServiceNow credentials to access the Virtual Agent and Service Portal.	High ▾
2	Authorization Levels	Defined roles including itil for process users and admin for system management and reporting.	High ▾
3	External Interfaces	Integration with ServiceNow Virtual Agent, Service Portal, and Automated Flow Designer.	High ▾
4	Transaction Processing	Automation of SLA breach justification capture and risk acknowledgment status updates.	High ▾

S.No	Requirement Category	Requirement Description	Priority (H/M/L)
5	Reporting	Generation of dashboards for SLA Breaches by Reason, Assignment Group, and Performance Trends.	Medium ▾
6	Business Rules	Implementation of UI Policies making justification and reason mandatory when SLA reaches risk thresholds.	High ▾
7	Compliance	Adherence to SLA governance and audit readiness standards through automated documentation.	High ▾

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance	Real-time notification and field updates upon SLA reaching defined breach thresholds.	SLA trigger activates at 80% threshold.
2	Scalability	System ability to manage concurrent incident volumes across multiple assignment groups.	Supports enterprise-wide incident loads.
3	Security & Privacy	Secure data encryption and vulnerability management for justification records.	ServiceNow standard AES-256 encryption.
4	Availability	Continuous access to self-service SLA tools and Virtual Agent guidance.	24/7 self-service experience availability.

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
5	Usability	Conversational chatbot interface providing clear governance instructions and simplified navigation.	Positive user feedback on conversational flow.
