

Virtual Agent-Driven SLA Breach Awareness & Justification System

System Validation & Implementation Report

Date	XXXXX
Team ID	XXXXX
Project Name	Virtual Agent-Driven SLA Breach Awareness & Justification System

Step 1: Implementation Overview

Field	Details
Platform Used	ServiceNow (Admin Capabilities)
Core Modules	Flow Designer, UI Policy, Virtual Agent, Reporting
Target Process	Incident Management SLA Governance
Test Environment	Personal Developer Instance (dev352797 / dev316450)

Field	Details
Validation Date	13-07-2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	Requirement	Expected Outcome
1	Incident Creation	Mandatory field entry	Incident number generated
2	SLA Attachment	Verify "Incident Resolution" SLA	SLA record visible in related list
3	SLA At Risk Trigger	Wait until threshold reaches $\geq 80\%$	"SLA At Risk" flag set to True
4	Notification Email	Flow Designer trigger at 80%	Email sent to Assignee & Manager
5	Virtual Agent Invocation	Open VA on Service Portal	Governance instructions displayed

Step 3: Validation Results

S.No	Metric / Feature	Target Functionality	Actual Result	Status
1	Proactive Awareness	Email & VA alerts at 80%	Successfully triggered	Pass ▾
2	Field Mandatory (UI Policy)	Breach Reason mandatory at risk	Fields locked for input	Pass ▾
3	VA Acknowledgment	Capture user "Yes" response	Acknowledgment recorded	Pass ▾
4	Reporting Accuracy	Centralized SLA visibility	Widgets load successfully	Pass ▾
5	Data Distribution	Breach Reason breakdown	Pie chart grouped correctly	Pass ▾

Step 4: Observations & Analysis

Key Findings:

The system effectively bridges the gap between SLA breaches and accountability by automating the notification process. The Flow Designer triggers as intended when the business elapsed percentage exceeds 80%, ensuring timely intervention.

Governance Effectiveness:

- **Mandatory Justification:** UI Policies ensure that "SLA Breach Reason" and "SLA Breach Justification" fields are mandatory and visible only when the SLA is at risk.

- **Conversational Guidance:** The Virtual Agent provides a structured 4-step instruction set (Open Form, Provide Reason, Add Justification, Acknowledge Risk) to guide users through compliance.

Reporting Insights:

Initial data shows that "Dependency on third party" is a primary reason for SLA breaches, and the majority of current breaches (94.12%) remain unacknowledged, highlighting the need for this automated system.

Step 5: Evidence / Documentation

Attach screenshots from the ServiceNow instance below:

- **Flow Designer Configuration:** Showing the trigger for 80% business elapsed time.
- **Virtual Agent Conversation:** Demonstrating the "SLA Breach Awareness & Justification" topic flow.
- **SLA Dashboard:** Displaying the "SLA Breaches by Reason" and "Pending Justifications" widgets.
